

One Identity Manager Release Notes for Database Systems Integration Module 9.2

Release Notes

07 September 2023, 10:35

This release notes provide information about the Database Systems Integration (DSI) module used for connecting to native databases.

For the most recent documents and product information, see the [One Identity Manager documentation](#).

About this release

This release introduces a new One Identity Manager module, the Database Systems Integration (DSI) which provides synchronization project templates to connect to multiple database engines through the One Identity Manager Generic Database Connector.

Supported platforms

The DSI module can be configured with the One Identity Manager 9.2.

The DSI template work with Oracle, MS SQL, SAP HANA , and MySQL database versions that are supported by One Identity Manager generic database connector.

Supported features

New features supported in the current release of the DSI module are listed here:

Table 1: New features

Features	Issue ID
The DSI Module now supports the use case related to isEffective in Oracle, MySQL and SAP HANA	251967
The Oracle template is validated against the new Oracle managed ADO.NET provider	269117

Oracle database

- Read all user accounts and their attributes
- Read all user roles
- Read all user profiles
- Read all tablespaces
- Read user role membership
- Read role membership
- Create and delete operations for users
- Change password for users
- Lock or unlock users
- Change role membership
- Change user role membership

MS SQL database

For server-level template

- Read all login accounts and their attributes
- Read all server roles
- Read all login role membership
- Read all role membership
- Create and delete operations for login
- Change password for logins
- Lock or unlock logins
- Change role membership
- Change login role membership

For database-level template

- Read all user accounts and their attributes
- Read all database roles or application roles
- Read all user role membership
- Read all role membership
- Create and delete operations for users
- Change password for users
- Lock or unlock users
- Change role membership
- Change user role membership

SAP HANA database

- Read all user accounts and their attributes
- Read all user roles
- Read all user role membership
- Read role membership
- Create and delete operations for users
- Change password
- Lock or unlock user
- Change role membership
- Change user role membership

MySQL database

- Read all user accounts and their attributes
- Read all user privileges
- Read user assigned privileges
- Create, read, update, and delete users
- Change password
- Lock or unlock user
- Change privilege membership

Resolved issues

The following is a list of issues addressed in this release.

Table 2: Resolved issues

Resolved Issue	Issue ID
Users are unable to add base object with new database with standard SQL port and non-Standard SQL port.	416949

Known issues

The following is a list of issues, including those attributed to third-party products, known to exist at the time of release.

Table 3: General known issues

Known Issue	Issue ID
Oracle template	
Assignment of GLOBAL_AQ_USER_ROLE role to an Oracle user is not supported in DSI.	110164
After creating a user, the CONNECT role does not appear in Groups . After a resynchronization the role is visible.	115982
New user creation with the option WITH ADMIN OPTION is not supported in DSI.	115976
Microsoft SQL template	
The fixed server or database role to fixed server, database, or user defined role assignment is restricted in MS SQL Server.	110662
While assigning role membership to login, the role public cannot be assigned through One Identity Manager. By default, it is assigned during login creation. The role public cannot be revoked for logins.	110682
Enabling or disabling of MS SQL Login for WINDOWS GROUP is not supported in DSI.	113273
Creating MS SQL Logins for certificate and asymmetric key is not supported in DSI.	115893
SAP HANA template	
Duplicate entries from Roles is not synchronized in DSI.	113841
Certain role membership assignments are not allowed to users and roles.	116105

System Requirements

Ensure that your system meets the following minimum hardware and system requirements before installing One Identity Manager. For more detailed information about system prerequisites, see the One Identity Manager Installation Guide.

NOTE: When setting up a virtual environment, carefully consider the configuration aspects such as CPU, memory availability, I/O subsystem, and network infrastructure to ensure the virtual layer has the necessary resources available. Please consult [One Identity's Product Support Policies](#) for more information on environment virtualization.

Every One Identity Manager installation can be virtualized. Ensure that performance and resources are available to the respective One Identity Manager component according to system requirements. Ideally, resource assignments for the database server are fixed. Virtualization of a One Identity Manager installation should only be attempted by experts with strong knowledge of virtualization techniques.

Minimum requirements for the database server

A server must meet the following system requirements for installation of a One Identity Manager database. Depending on the number of One Identity Manager modules and the accounts managed in One Identity Manager, the requirements for working memory, hard disk storage, and processors may be significantly greater than the minimum requirements.

Table 4: Database Server Minimum requirements

Requirement	Details
Processor	8 physical cores with 2.5 GHz+ frequency (non-production) 16 physical cores with 2.5 GHz+ frequency (production) NOTE: 16 physical cores are recommended on the grounds of performance.
Memory	16 GB+ RAM (non-production) 64 GB+ RAM (production)
Free disk space	100 GB
Operating system	Windows operating systems <ul style="list-style-type: none">Note the requirements from Microsoft for the installed SQL Server version. UNIX and Linux operating systems

Requirement

Details

Software

SQL Server

- Note the minimum requirements given by the operating system manufacturer for SQL Server databases.

- SQL Server 2019 Standard Edition (64-bit) with the current cumulative update
- SQL Server 2022 Standard Edition (64-bit) with the current cumulative update

NOTE: For performance reasons, the use of SQL Server Enterprise Edition is recommended for live systems.

- Compatibility level for databases: SQL Server 2019 (150)
- Default sort schema: case-insensitive, SQL_Latin1_General_CP1_CI_AS (Recommended)
- SQL Server Management Studio (recommended)

NOTE: The minimum requirements listed above are considered to be for general use. With each custom One Identity Manager deployment these values may need to be increased to provide ideal performance. To determine production hardware requirements, it is strongly recommended to consult a qualified One Identity Partner or the One Identity Professional Services team. Failure to do so may result in poor database performance.

For additional hardware recommendations, read the KB article <https://support.oneidentity.com/identity-manager/kb/290330/how-to-configure-settings-as-per-the-system-information-overview>, which outlines the System Information Overview available within One Identity Manager.

NOTE: In virtual environments, you must ensure that the VM host provides performance and resources to the database server according to system requirements. Ideally, resource assignments for the database server are fixed. Furthermore, optimal I/O performance must be provided, in particular for the database server. For more information about virtual environments, see [Product Support Policies](#).

Minimum requirements for the service server

The following system prerequisites must be fulfilled to install the One Identity Manager Service on a server.

Table 5: Service Server Minimum requirements

Requirement	Details
Processor	8 physical cores with 2.5 GHz+
Memory	16 GB RAM
Free disk space	40 GB
Operating system	Windows operating systems Following versions are supported: <ul style="list-style-type: none">• Windows Server 2022• Windows Server 2019• Windows Server 2016• Windows Server 2012 R2• Windows Server 2012 Linux operating systems <ul style="list-style-type: none">• Linux operation system (64 bit) supported by the Mono project or Docker images provided by the Mono project.
Additional Software	Windows operating systems <ul style="list-style-type: none">• Microsoft .NET Framework version 4.8 or later <p>NOTE: Take the target system manufacturer's recommendations for connecting the target system into account.</p> <hr/> Linux operating systems <ul style="list-style-type: none">• Mono 6.10 or later

Minimum requirements for clients

Table 6: Client Minimum requirements

Requirement	Details
Processor	4 physical cores with 2.5 GHz

Requirement	Details
Memory	4 GB+ RAM
Free disk space	1 GB
Operating system	Windows operating systems <ul style="list-style-type: none"> • Windows 11 (x64) • Windows 10 (32 bit or 64 bit) version 1511 or later
Additional Software	Windows operating systems <ul style="list-style-type: none"> • Microsoft .NET Framework version 4.8 or later • Microsoft Edge WebView2
Supported browsers	<ul style="list-style-type: none"> • Firefox (release channel) • Chrome (release channel) • Microsoft Edge (release channel)

Minimum requirements for the Web Server

The following system prerequisites must be fulfilled to install web applications on a web server.

Table 7: Web Server Minimum requirements

Requirement	Details
Processor	4 physical cores 1.65 GHz+
Memory	4 GB RAM
Free disk space	40 GB
Operating system	Windows operating systems <ul style="list-style-type: none"> • Windows Server 2022 • Windows Server 2019 • Windows Server 2016 • Windows Server 2012 R2 • Windows Server 2012 Linux operating systems <ul style="list-style-type: none"> • Linux operation system (64 bit) supported by the Mono project or Docker images provided by the Mono project. Please note the operating system manufacturer's minimum requirements for Apache HTTP Server.

Requirement	Details
Additional Software	<p data-bbox="443 271 813 300">Windows operating systems</p> <ul data-bbox="491 322 1380 1052" style="list-style-type: none"> <li data-bbox="491 322 1141 351">• Microsoft .NET Framework version 4.8 or later <li data-bbox="491 374 1380 434">• Microsoft Internet Information Service 10 or 8.5 or 8 or 7.5 or 7 with ASP.NET 4.8 and Role Services: <ul data-bbox="571 456 1380 1052" style="list-style-type: none"> <li data-bbox="571 456 1348 486">• Web Server > Common HTTP Features > Static Content <li data-bbox="571 508 1252 568">• Web Server > Common HTTP Features > Default Document <li data-bbox="571 591 1284 620">• Web Server > Application Development > ASP.NET <li data-bbox="571 642 1340 703">• Web Server > Application Development > .NET Extensibility <li data-bbox="571 725 1244 786">• Web Server > Application Development > ISAPI Extensions <li data-bbox="571 808 1340 837">• Web Server > Application Development > ISAPI Filters <li data-bbox="571 860 1220 889">• Web Server > Security > Basic Authentication <li data-bbox="571 911 1268 940">• Web Server > Security > Windows Authentication <li data-bbox="571 963 1380 992">• Web Server > Performance > Static Content Compression <li data-bbox="571 1014 1236 1075">• Web Server > Performance > Dynamic Content Compression <p data-bbox="443 1075 813 1104">Linux operating systems</p> <ul data-bbox="491 1126 1252 1400" style="list-style-type: none"> <li data-bbox="491 1126 662 1155">• NTP Client <li data-bbox="491 1178 766 1207">• Mono 6.10 or later <li data-bbox="491 1229 1252 1258">• Apache HTTP Server 2.0 or 2.2 with following modules: <ul data-bbox="571 1281 774 1400" style="list-style-type: none"> <li data-bbox="571 1281 750 1310">• mod_mono <li data-bbox="571 1332 702 1361">• rewrite <li data-bbox="571 1384 774 1413">• ssl (optional)

Minimum requirements for the Application Server

The following system prerequisites must be fulfilled for installation of the application server.

Table 8: Application Server Minimum requirements

Requirement	Details
Processor	8 physical cores with 2.5 GHz+
Memory	8 GB RAM
Free disk space	40 GB
Operating system	<p>Windows operating systems</p> <ul style="list-style-type: none"> • Windows Server 2022 • Windows Server 2019 • Windows Server 2016 • Windows Server 2012 R2 • Windows Server 2012 <p>Linux operating systems</p> <ul style="list-style-type: none"> • Linux operation system (64 bit) supported by the Mono project or Docker images provided by the Mono project. Please note the operating system manufacturer's minimum requirements for Apache HTTP Server.
Additional Software	<p>Windows operating systems</p> <ul style="list-style-type: none"> • Microsoft .NET Framework version 4.8 or later • Microsoft Internet Information Service 10 or 8.5 or 8 or 7.5 or 7 with ASP.NET 4.8 and Role Services: <ul style="list-style-type: none"> • Web Server > Common HTTP Features > Static Content • Web Server > Common HTTP Features > Default Document • Web Server > Application Development > ASP.NET • Web Server > Application Development > .NET Extensibility • Web Server > Application Development > ISAPI Extensions • Web Server > Application Development > ISAPI Filters • Web Server > Security > Basic Authentication • Web Server > Security > Windows Authentication • Web Server > Performance > Static Content Compression • Web Server > Performance > Dynamic Content Compression <p>Linux operating systems</p>

Requirement	Details
-------------	---------

- NTP Client
- Mono 6.10 or later
- Apache HTTP Server 2.0 or 2.2 with following modules:
 - mod_mono
 - rewrite
 - ssl (optional)

Product licensing

Use of this software is governed by the Software Transaction Agreement found at www.oneidentity.com/legal/sta.aspx. This software does not require an activation or license key to operate.

Upgrade and installation instructions

For more information on upgrade and installation instructions for the Database Systems Integration module, refer the *Administration Guide for Connecting to generic databases through Database Systems Integration Module*.

Schema changes

The following provides an overview of schema changes from One Identity Manager version 8.0.3 up to version 9.2 included in DSI Module.

- New column **UNSAccountB.HostName** as host name of the host where the **mysql** user account has access.
- New column **UNSAccountB.AccountType** as the type of MSSQL/SAP user.

Changes to system connectors

The following section provides an overview of the modified synchronization templates and an overview of all patches provided by Database Systems Integration module for One Identity Manager version 8.0.3 to version 9.2. Apply the provided patches to existing synchronization projects. For more information on applying patches see, *Applying patches to synchronization projects* topic in the latest *One Identity Manager Release Notes*.

Configuration file changes in Database Systems Integration module

The configuration files mentioned here must be updated to reflect the latest changes.

- MSSQL Database Level configuration file
- MSSql Server Level configuration file
- SAPSql configuration file

Applying changes to the configuration file

1. Open the Synchronization Editor and open an existing synchronization project.
2. Navigate to the required **Target System** in the left pane.
3. Click **Edit Connection**.
The target system connection wizard is displayed.
4. Click Next till the Load configuration page is displayed.
5. Select the configuration file and complete the connection.
6. Click **Commit to database**.

The updated configuration file is loaded for the existing synchronization project.

Modified synchronization templates

The following topic provides an overview of the modified synchronization templates. Patches are available for updating synchronization templates in the existing synchronization projects. For more information on patches, see *Patches for synchronization projects* topic in *One Identity Manager Release notes*.

Table 9: Modified synchronization templates

Module	Synchronization template	Type of Modification
Database System Integration	MSSql DB Level Template	Changed
	MSSql Server Level Template	Changed
	Oracle Database Template	Changed
	SAP HANA Template	Changed

Patches for synchronization projects

The following is a list of all patches provided in the Database Systems Integration Module for One Identity Manager 9.2 synchronization projects.

Table 10: Patches for synchronization projects

Patch ID	Patch	Description	Issue ID
VSTS#114678	Add mappings for AccountType and Canonicalname in Database Systems Integration templates	Add mappings for AccountType and Canonicalname in Database Systems Integration templates	114678 and 124586

IMPORTANT: After the patch installation, run the initial synchronization for the Database Target Systems.

Globalization

This section contains information about installing and operating this product in non-English configurations, such as those needed by customers outside of North America. This section does not replace the materials about supported platforms and configurations found elsewhere in the product documentation.

This release is Unicode-enabled and supports any character set. It supports simultaneous operation with multilingual data. This release is targeted to support operations in the following regions: North America, Western Europe and Latin America, Central and Eastern Europe. The release is localized in the following languages: **German**. This version has the following capabilities or constraints: Other languages, designated for the Web UI, are provided in the product One Identity Manager Language Pack.

About us

One Identity solutions eliminate the complexities and time-consuming processes often required to govern identities, manage privileged accounts and control access. Our solutions enhance business agility while addressing your IAM challenges with on-premises, cloud and hybrid environments.

Contacting us

For sales and other inquiries, such as licensing, support, and renewals, visit <https://www.oneidentity.com/company/contact-us.aspx>.

Technical support resources

Technical support is available to One Identity customers with a valid maintenance contract and customers who have trial versions. You can access the Support Portal at <https://support.oneidentity.com/>.

The Support Portal provides self-help tools you can use to solve problems quickly and independently, 24 hours a day, 365 days a year. The Support Portal enables you to:

- Submit and manage a Service Request
- View Knowledge Base articles
- Sign up for product notifications
- Download software and technical documentation
- View how-to videos at www.YouTube.com/OneIdentity
- Engage in community discussions
- Chat with support engineers online
- View services to assist you with your product
