Overview

Attend this three-day One Identity Safeguard for Privileged Passwords Implementation course to build the knowledge and skills needed to successfully install, configure, operate, and troubleshoot One Identity Safeguard for Privileged Passwords. An interactive instructor-led course, it is taught by leading industry experts. Plus, as part of the course, you can safely hone your Safeguard skills in simulated environments to your increase your hands-on experience before you taking on a live implementation.

Note: For technology professionals looking to build your knowledge for One Identity Safeguard for Privileged Passwords and One Identity Safeguard for Privileged Sessions – each of which is a three-day training session – you can save a day out of the office by taking the [One Identity Safeguard Foundation Training](#) course to learn about both in a single five-day training.

For One Identity partners, you must be certified (pass exams) to be eligible to deploy solutions.

Intended Roles

- Partners seeking to deploy One Identity Safeguard
- Architects
- Security and server administrators who manage One Identity Safeguard for Privileged Passwords

Prerequisites

- Strong proficiency managing privileged accounts for various target systems such as Active Directory, UNIX and Linux
- Basic PKI knowledge
- Recommended: experience with certificates, RDP and SSH protocols

Formats

- Private instructor-led training delivered at a customer chosen site
- Public instructor-led training delivered on pre-scheduled dates at a One Identity facility

Note: For public trainings, if the minimum number of students has not been reached two weeks before the training date, One Identity reserves the right to cancel the course.
