## Overview

Attend this three-day One Identity Safeguard for Privileged Sessions Implementation course to build the knowledge and skills needed to successfully install, configure, operate, and troubleshoot One Identity Safeguard for Privileged Sessions. An interactive instructor-led course, it is taught by leading industry experts. Plus, as part of the course, you can safely hone your Safeguard skills in simulated environments to your increase your hands-on experience before you taking on a live implementation.

**Note:** For technology professionals looking to build your knowledge for One Identity Safeguard for Privileged Sessions and One Identity Safeguard for Privileged Passwords - each of which is a three-day training session - you can save a day out of the office by taking the [One Identity Safeguard Foundations Training](#) course to learn about both in a single five-day training.

For One Identity partners, you must be certified (pass exams) to be eligible to deploy solutions.

## Intended Roles

- Partners seeking to deploy One Identity Safeguard
- Architects
- Security and server administrators who manage One Identity Safeguard for Privileged Sessions

## Prerequisites

- Intermediate IT knowledge
- Basic UNIX and Windows administration knowledge
- Basic PKI knowledge
- Intermediate TCP/IP knowledge

## Formats

- Private instructor-led training delivered at a customer chosen site
- Public instructor-led training delivered on pre-scheduled dates at a One Identity facility

**Note:** For public training, if the minimum number of students has not been reached two weeks before the training date, One Identity reserves the right to cancel the course.
